Critical Concepts in Linguistics. 4 vols.**

What educational approaches best serve language-minority children? What policies, programmes, and circumstances encourage or contribute to minority-language maintenance? How do we make sense of the ecology of language development and socialization in non-traditional settings? And what is the relationship of language, learning, and technology?

This book is an essential work of reference which answers these kinds of questions. It is destined to be valued by specialists and scholars working in the area—as well as by educational policy-makers and professionals—as a vital one-stop research tool
