This Handbook responds to the needs and aspirations of current and future generations of development economists by providing critical reference material alongside or in relation to mainstream propositions. Despite the potential of globalization in accelerating growth and development in low and middle-income countries through the spread of technology, knowledge and information, its current practice in many parts of the world has led to processes that are socially, economically and politically and ecologically unsustainable. It is critical for development economists to engage with the pivotal question of how to change the nature and course of globalization to make it work for inclusive and sustainable development.
